

Care advice

Care advice

- Sunbrella fabrics benefit from a treatment which guarantees dirt resistance. But as with any other material exposed to the elements, regular maintenance must be done.

- One of the best ways to look after your Sunbrella fabric is to clean it every month with fresh water (low-pressure water jet) and using a soft brush (similar to a clothes brush)

- The fabric should be given a fuller cleaning every 2 years.

Care advice

➤ When cleaning Sunbrella fabric, it is important that the following guidelines are respected:

- Never use detergents or high-pressure cleaners – use only mild soap.
- The water should be cold or warm. the temperature should not exceed 38°C.
- Leave to dry in the open air. Never apply heat (e.g. by using a hair dryer).

Care advice

➤ When cleaning a Sunbrella fabric on a boat, follow these steps:

- Remove as much dirt as you can, using a brush
- Rinse the fabric using a medium-pressure jet of water
- Dilute a little mild soap in water
- Wash using a soft brush
- Wait a few minutes so the water and soap can be absorbed
- Rinse thoroughly with clean water
- Leave to dry in the open air

➤ If marks remain, you can use soapy water combined with mild bleach, as long as the following proportions are respected: 10cl maximum of bleach* per litre of water, or use cleaning products from the 303 range.

** Be careful to protect other fabrics that may not be able to withstand exposure to bleach.*

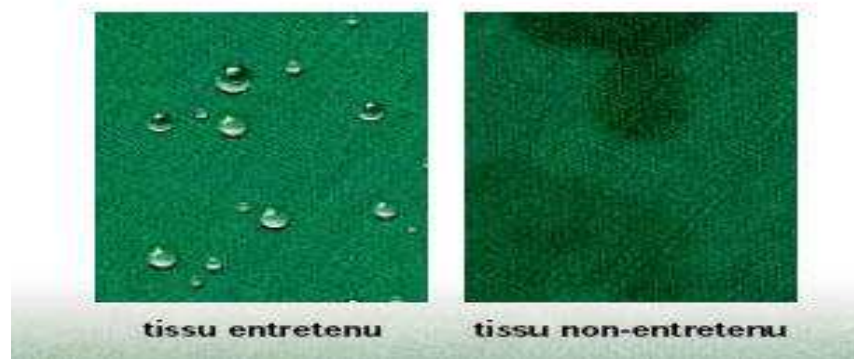

303 products

303 products are designed to help you to clean and maintain your fabric:

Fabric Cleaner: cleans the fabric

Fabric Guard: maintains and restores waterproofing after the fabric has been cleaned

cared-for fabric

non cared-for fabric

303 products

Fabric Cleaner:

- ◆ Maintains the shine of the fabric.
- ◆ Removes stubborn stains.
- ◆ Contains no soap, detergent or solvent.
- ◆ Non-toxic, biodegradable, leaves no residue after rinsing.

303 products

Fabric Guard:

- ◆ Prolongs the effectiveness of chemical treatment applied when the fabric is manufactured.
- ◆ Leaves a thin waterproof layer on the fabric that enables it to recover its water repellent properties.
- ◆ Protects against weather, staining, mildew and exposure to UV rays.

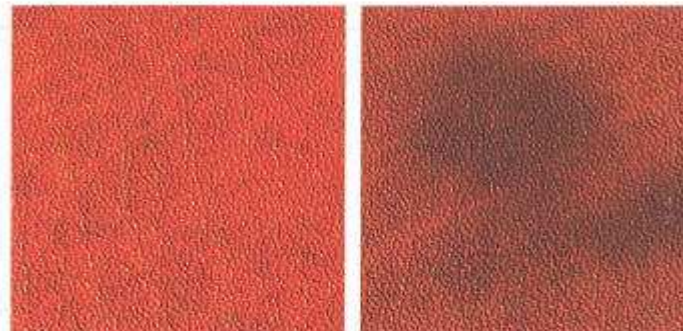

303 products

Aerospace Protectant:

- ◆ The only anti-UV treatment which works effectively on PVC.
- ◆ Ensures an impeccable finished appearance.
- ◆ Prevents stains, dirt and dust : materials stay cleaner for longer and are easier to clean.
- ◆ Protects against scratching.
