

# Sunbrella Plus

## *Waterproofing and Breathability*

- Woven in the same way as New Sunbrella, Sunbrella Plus offers enhanced waterproofing, thanks to its acrylic coating on the back.
- Applications: hoods, biminis, bimini tops, closures.

# Sunbrella Plus

## Waterproofing and Breathability

### Main features

- ◆ Outstanding waterproofing: Schmerber > 1,000mm, or 3x greater than New Sunbrella.
- ◆ Maximum resistance to mildew: acrylic coating with special seawater anti-fungal treatment.
- ◆ Excellent breathability (2.62l/m<sup>2</sup>/second at pressure of 2 millibars) despite its high waterproofing qualities.

### Plus

- ◆ Range of colours identical to that of New Sunbrella. Practical for coordinates.

### Our recommendations

- ◆ The preferred choice when waterproofing and breathability are both essential criteria.

# Sunbrella Plus and the competition

## Excellent waterproofing/breathability ratio

	Sunbrella +	Sauleda	Recassens	Sattler	Sattler Premium	Markilux
Schmerber based on EN 20811/92 (average expressed in mm)	<b>1040</b>	778	813	936	880	> 5000
Airtightness (average expressed in l/m2/s at pressure of 2 millibars)	<b>2.8</b>	1.9	2.3	2.2	2.4	1.2

- ◆ Sunbrella +: the best watertightness (except for Markilux, which comes with an additional polyurethane coating), and also the greatest breathability.

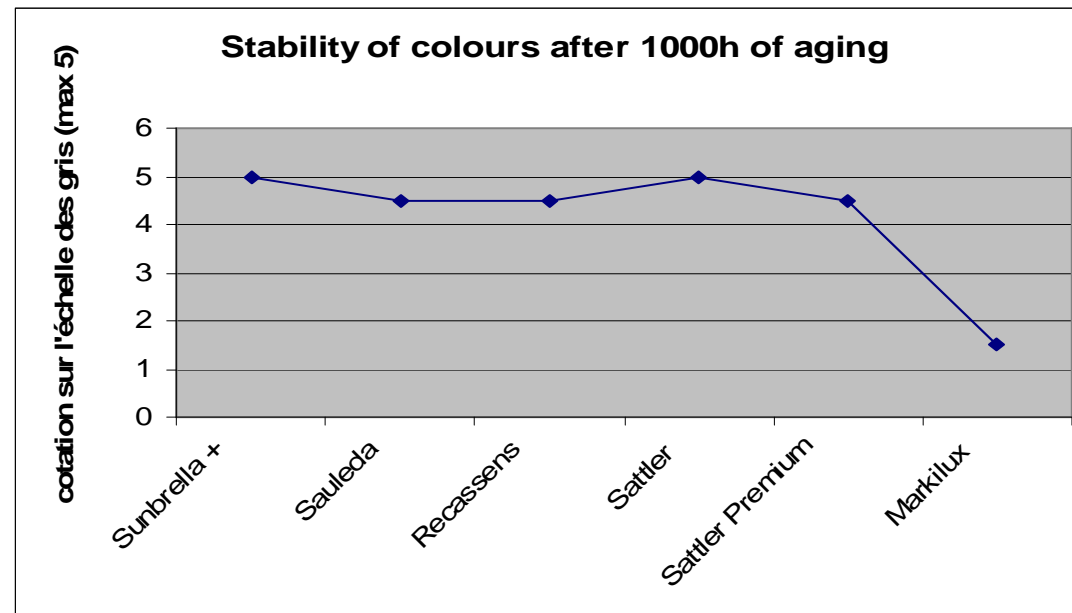

*Tests conducted internally based on 2 to 3 product samples per brand, similar colours. June 2007.*

# Sunbrella Plus and the competition

## Exceptional colourfastness

- ♦ Sunbrella +: after 1000h of aging, Sunbrella + maintains their initial colours, contrary to Sauleda, Recassens, Sattler Premium and Markilux.

Tests conducted internally based on 2 to 3 product samples per brand, similar colours. June 2007.

1000h of aging corresponds to approximately 1 year of normal exposure to the weather conditions in the South of France

# Sunbrella Plus and the competition

## The top performer against mildew

	Sunbrella +	Sauleda	Recassens	Sattler	Sattler Premium	Markilux
<b>Intensity of fungal growth</b>	<b>0</b> No sign of fungal growth, either on the fabric or around it	2.5 Growth visible to the naked eye, representing over 25% of the sample surface	5 Strong growth, visible to the naked eye	0 but with dispersal of anti fungicide treatment in the test tube	0 but with dispersal of anti fungicide treatment in the test tube	0 but with dispersal of anti fungicide treatment in the test tube

- ◆ Sunbrella +: No trace of mildew and no dispersal of anti fungicide treatment. The anti fungicide treatment of Sunbrella + is the most stable, it does not pollute the environment.

*Test conducted by the French Textile and Clothing Institute (IFTH) according to the NF EN 14119 standard, which measures the action of microscopic fungal growth on textiles. Contact time between the fungi and the textiles: 2 weeks. Rating of the fungal growth on a scale ranging from 0 to 5.*
